Venue : Scudder Auditorium and the Adjacent Halls.

Link for Website and Registration: www.cmcendocon2025.com

The epidemic of diabetes is indeed a scourge that induces a significant degree of infliction for more than 100 million patients in India. Moreover, it is a global malady that affects more than 830 million patients worldwide. Diabetes in the lean is more than just a personification of illness, it occurs predominantly as Type 1 diabetes mellitus, but research across the world and home-grown exploration and research in Vellore has shown that there are other Important causes which include primary pancreatic disorders, low birth weight, genetic disorders of insulin production and resistance and malnutrition which may be antenatal and compounded by postnatal factors.

The dawn of January 2025 will witness an epochal conclave that involves the footfall of close to 30 international experts from across the globe encompassing 5 continents and 15

countries, and 70 national experts, covering the length and breadth of diabetes from a pragmatic, clinical, academic and research-oriented perspective ranging from field to bench to bedside.

Forays into the nutritional aspects as an etiological factor involved in the evolution of diabetes, particularly the great paradox of undernutrition as a causative factor will be discussed. Diabetes in pregnancy is an epidemic within an epidemic and is responsible for another torrential shower of young women who are affected with this problem, and there are orations that will cover these disorders in detail.

State of the art research on genetics as a factor which is involved in the development of diabetes is talked about, and these conditions should be considered as not too uncommon, since their therapy may differ from other causes of young onset diabetes mellitus.

Lucid workshops and sessions will cover the diabetes foot, Genetics, Pancreatic and islet cell transplantation, Body composition analysis and insulin pump usage.

In an effort to stimulate growing researchers and young minds, there are oral and poster presentations and quiz competitions for undergraduates and interns, broad specialty postgraduates and Higher specialty postgraduates.

The meeting in itself will be of value for a broader audience, ranging from Physicians, obstetricians, pediatricians, nutritionists, community health physicians, general practitioners, laboratory scientists, basic science researchers and endocrinologists.

Speakers will include the presidents of the international diabetes federation, the American diabetes association and chairs of the international diabetes federation for Africa, South Asia and other regions.

This meeting has been awarded 15 credit points by The Tamil Nadu Dr. M.G.R. Medical University for participants under Category III, and 4 TNMC credit hours by the Tamil Nadu Medical Council (TNMC) for participants with an MCI registration number.

We invite you all to be part of this academic event in the year to come.

ORATIONS

Viswanathan Mohan
Chairman
Dr. Mohan's Diabetes Specialities Centre
Chennai
A S Kanagasabapathy Oration
Early Gestational Diabetes

Meredith A. Hawkins
Harold and Muriel Block Chair
Professor of Medicine
Albert Einstein College of Medicine, New York
USA
Homi Babha Oration
Physiology of Atypical Lean Diabetes

Nikhil Tandon
Professor and Head of Medicine
All India Institute of Medical Sciences AIIMS
New Delhi
Delia Ann Houghton Oration
Post Natal Status and Gestational Diabetes

Allan Arthur Vaag
Professor of Diabetes Translational Research
Lund University
Sweden
Albert Einstein Oration
Developmental Programming of Type 2 Diabetes-
Molecular Metabolism and Clinical Consequences

Kaushik Ramaiya
The East African Diabetes Study Advisory Group
Tanzania
Oskar Minkowski Oration
Phenotypic Variations of Diabetes in Africa- A Diverse Spectrum
